Exercise: Intro and Basic Syntax

Problems for exercises and homework for the <u>"C# Fundamentals" course @ SoftUni</u>
You can check your solutions in <u>Judge</u>

1. Ages

Write a program that determines if a person is **baby**, **child**, **teenager**, **adult** or **elder** based on the given age.
The boundaries are:

- **0-2 – baby**
- **3-13 – child**
- **14-19 – teenager**
- **20-65 – adult**
- **>= 66 – elder**
- All the values are **inclusive**.

Examples

Input	Output
20	adult
1	baby
100	elder
